HYPER TRAINING

EFFECTIVE INNOVATION

synArea consultants

HyperTraining strengthens the technical competence and the value of your know-how. A single solution for technical documentation, digital manuals, personalized learning, training and assessment of acquired skills. Compatible with the main LMS, it integrates AR/VR, multimedia contents, immersive devices, smartphones and tablets, constantly evolving towards Machine Learning.

HyperTraining: your knowledge, our passion!

HYPER TRAINING
EFFECTIVE INNOVATION

Enhance your competence

HyperTraining enhances the skills of your company in three steps: strengthen the document system by creating the knowledge base, transmit it to your collaborators in a personalized way: workers, maintainers and after-sales support, finally it offers your customers an increasingly complete and in-depth training service for the optimal use of your products.

Integrated solution

HyperTraining is effective because the technical documentation integrates a system for personalized training, monitoring and evaluation of acquired skills. Digital manuals are the only solution at the basis of documentation and training, reducing costs and increasing the quality of services.

Effective tool

HyperTraining is the solution that integrates classic analog and digital document systems with multimedia material, virtual and augmented reality, immersive devices, web applications and mobile devices.

Experience and innovation

HyperTraining was born from a decade of experience in the creation of AR / VR applications in the industrial, educational and health-care fields. Participation in multiple R&D projects is the engine of HyperTraining's constant evolution towards Machine Learning and Artificial Intelligence (AI).

Secure your business know-how. Create an interactive technical manual for training and / or customer support.
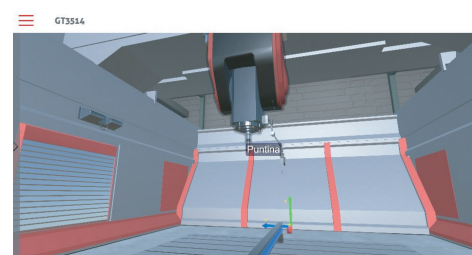

Enjoy content via the web, tablet or smartphone. Use it for your staff in a Personalized way and check the learning level of each one.

Use the same multimedia content for the technical support to your customers, taking advantage of all available technologies and reducing costs.

Inserimento Boccola di Centraggio

AR/VR immersive devices and mobile apps

HyperTraining integrates modern technologies to optimize your resources: the same multimedia content can be used via the web or via smartphone or tablet and can be used for staff training, or to create interactive user manuals or company technical documentation.
